Outrigger tail 15cm with balance rod  
(136770)

Anchor pole axis  
(302090)

„Pro“ stands not only for more safety, payload and handling but also for more flexibility. You can mount (tool free) an anchor pole axis (302090) on every outrigger. Every outrigger has a hole for that. You need the anchor pole axis where previously the “A” outrigger (1A, 2A, 3A, 4A) was needed.

The main outrigger has the same length like the old outriggers (150cm). As an option you can use shorter outriggers (115cm / 85cm). They correspond to the old outriggers 3 / 4.

For the longest Foxy Pro version (Version 8) you need a total of 9 pieces of the main outrigger (150cm). 8x for the front side and 1x for the rear side.

To mount the suspension rod you have to push the anchor pole axis (302090) into the intended hole of the outrigger. On both ends of the crane you have to put the outrigger tail (136770).

With this outrigger tail you are faster and have more flexibility if you want to change the crane length because you just have to replace the outrigger tail and not the whole outrigger.

The outrigger tails length is 15cm.

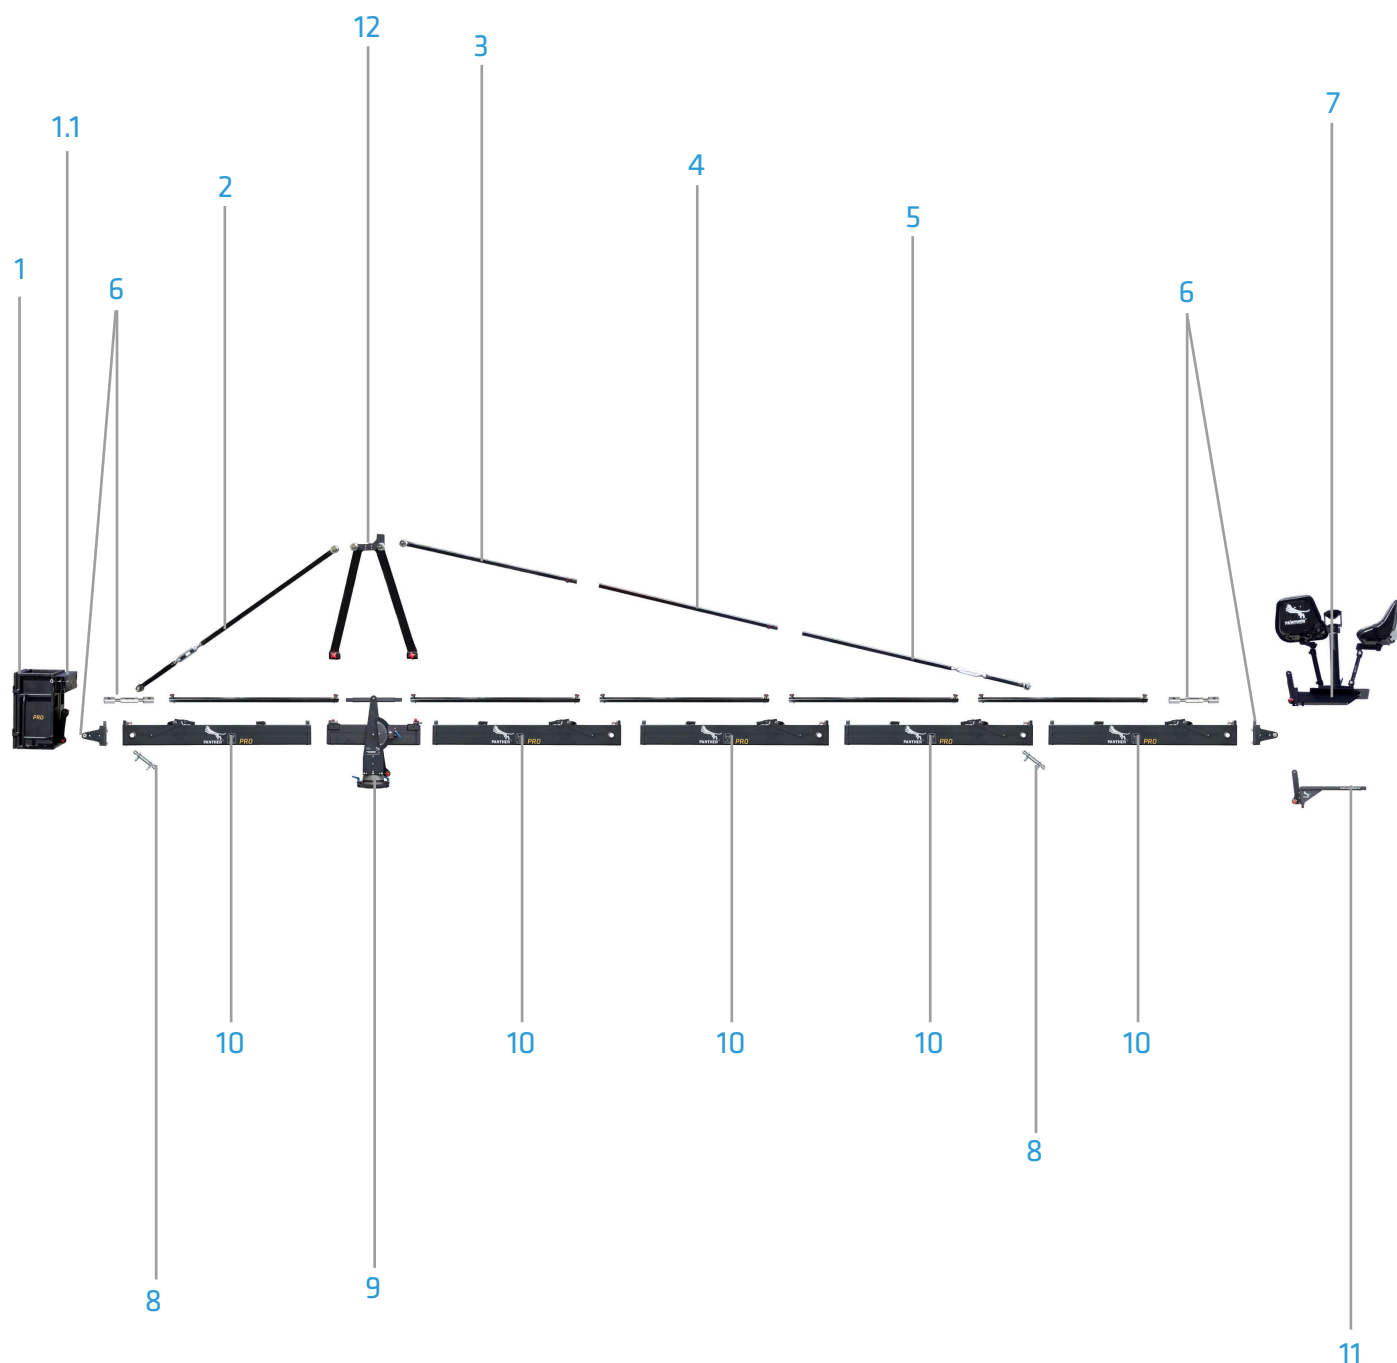

So the Foxy Pro has to be reconfigured.

#### Example:

The “old” outrigger 1 (126898) had a length of 165cm. The new outrigger will be composed with the main outrigger (302256 - 150cm) and the outrigger tail (136770 - 15cm).

The same goes for outrigger 1A and additionally you have to put the anchor pole axis (302090) into the outrigger.

## REAR SIDE

You can choose between 3 outrigger lengths on the rear side:  
Depending on outrigger length you need the suitable „Anchor pole back“.
